## Projects

### Crypto-conversion Web App

#### Collaborative Project

- A web application that takes in crypto-currency values and converts them to different world currency values. The application allows the user to search and select up to 10 crypto-currencies, then prompts the user to select a world currency (ex:USD, Yen) to convert the value to.
- Wire-framed and implemented a visually aesthetic and responsive front end using HTML/CSS. Implemented BULMA CSS Framework to organize and create the front end.
- Developed a working search bar with API functionality.
- Utilized and implemented two server side APIs Crypto-Tracker & Currency Converter.

### Wire-Proxies-Tool Discord Automation

#### Proxy Generation Tool

- A multifunctional proxy generation tool that takes in a user's command through direct message and creates arguments for each item in the message. The tool takes in the user's Discord ID, Proxy Authorization code,
- Developed using: Packetstream API, Fetch API, Discord.js, Request.js, NodeJS, File System

### Product Preview Card Component

#### Front End Mentor Challenge

- Developed a responsive product card utilizing only HTML and CSS.
